

Mylar Summer Footwear

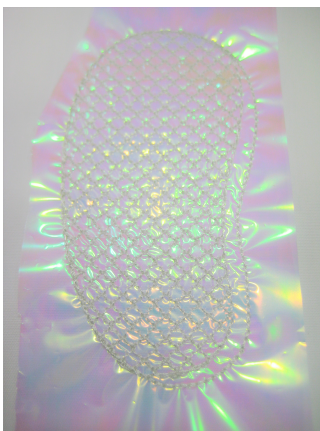

These designs use mylar. The first two colors (red and blue) are there simply as color stops to designate the mylar placement and tack down. Use the color thread for the third thread you have chosen to stitch the first and second stitchings also so no odd thread colors show through and simply thread changes.

Stitch the first thread color (using your choice for the third thread color). This will outline the area for mylar placement.

Lay down a piece of mylar to cover the complete area of the first stitching. Stitch the second thread color (using your choice for the third thread color). This will tack down the mylar and secure it in place.

Continue to stitch the third thread color for the design. Then stitch out the remaining design and when completed stitching, tear away the excess mylar around the design. The stitching will have perforated the mylar for simple removal.
