

Direction for embroidery with mylar

Hoop your fabric and medium weight tearaway stabilizer. Stitch the first color, which I made blue.

Now, place your mylar over the entire stitched area. It does not matter which side is up or down. I use painters tape to secure the corners and keep it from wrinkling.

Continue to stitch the rest of the design. Remove Hoop from embroidery machine.

Remove all of the mylar from around the entire design. I use these forceps to pull the mylar out of the small areas. These work very well.
